

How to Install and Login using the DGSI VPN Client

Provide IT with a manager approved VPN ACCESS form. You can find this form [HERE](#)

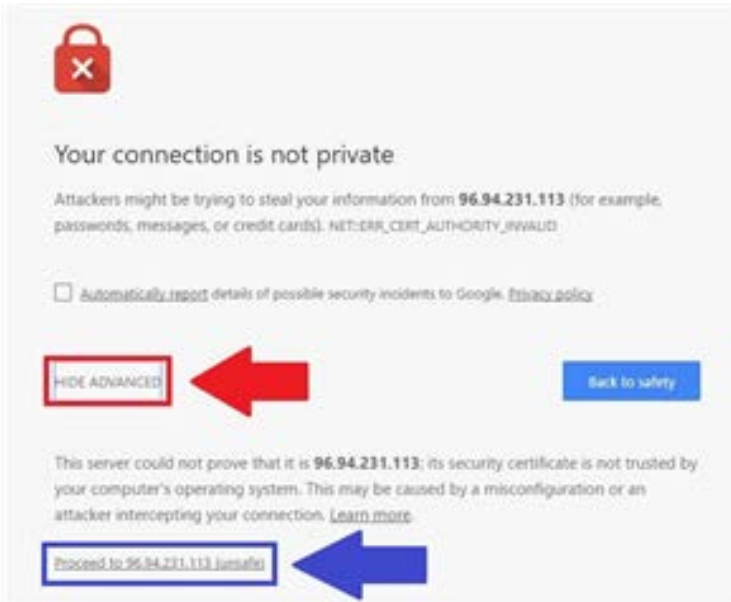

Step 1: Open your preferred web browser (Ex: Google Chrome)

Step 2: At the top of your browser in the address bar, enter the address: <https://vpn.dgsi.ca>

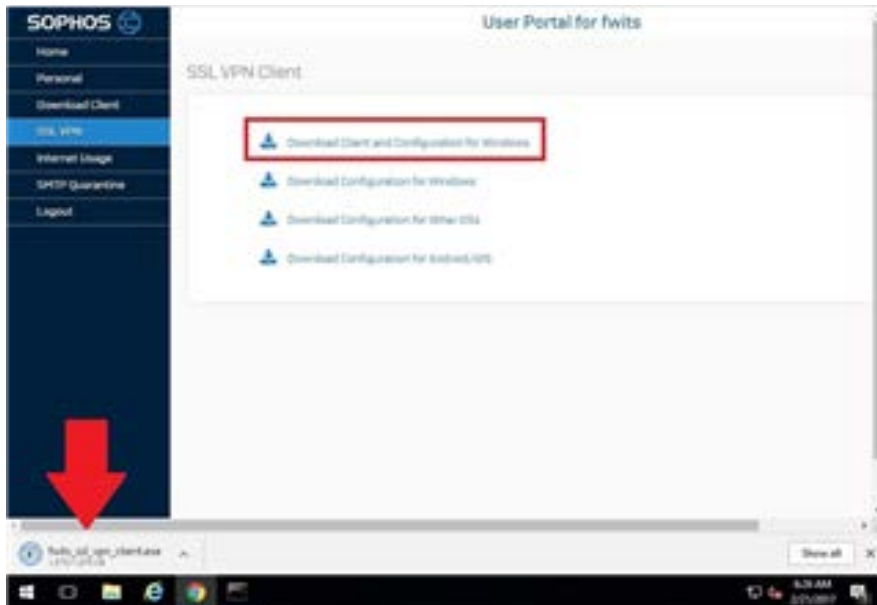

Step 3: You will get a warning that your connection may not be private. Simply bypass this page by clicking "**ADVANCED**" and then "**Proceed to...**"

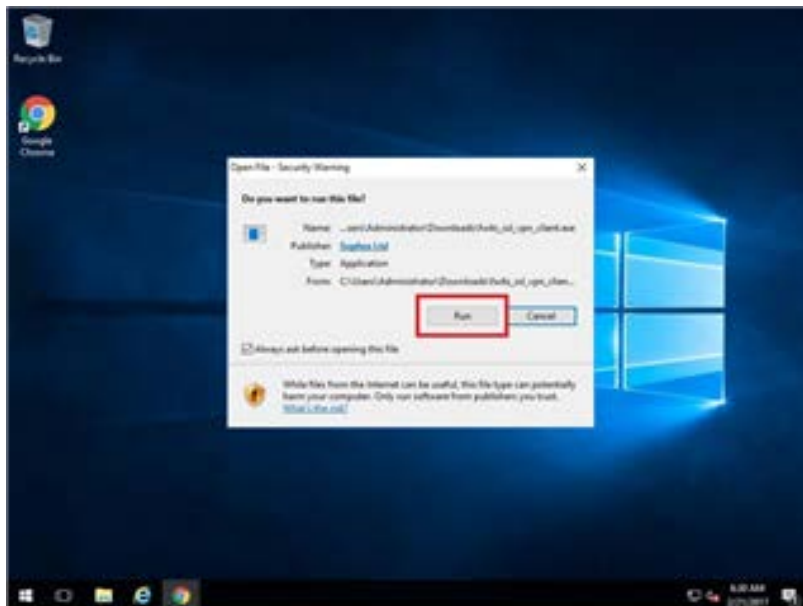

Step 4: Login with your given user credentials

Step 5: Click "Download Client and Configuration for Windows" and then the download should begin. After the download has finished, double-click it to start the setup.

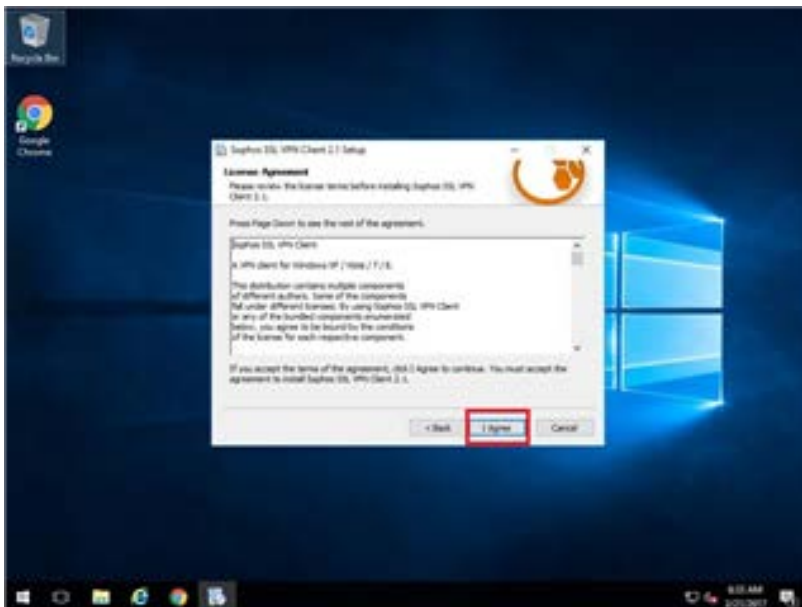

Step 6: Click "Run" on the Security Warning.

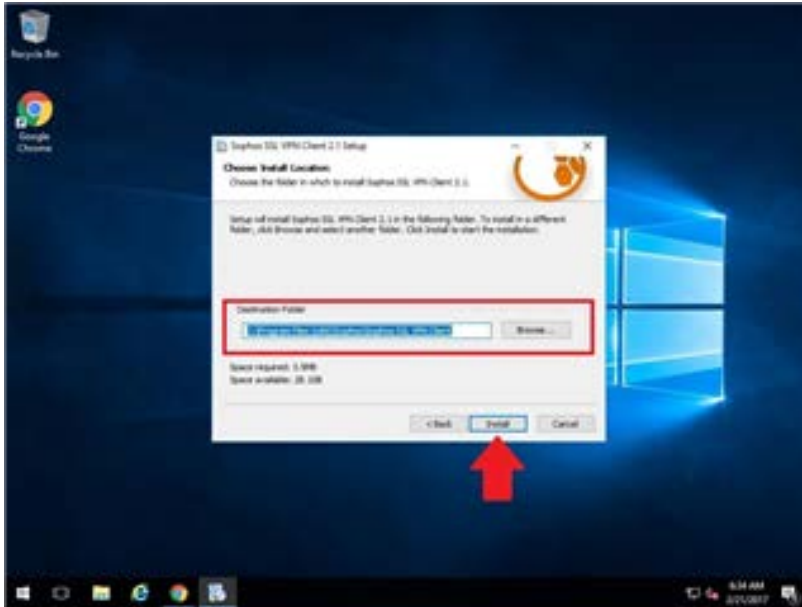

Step 7: once the installer has started click "Next"

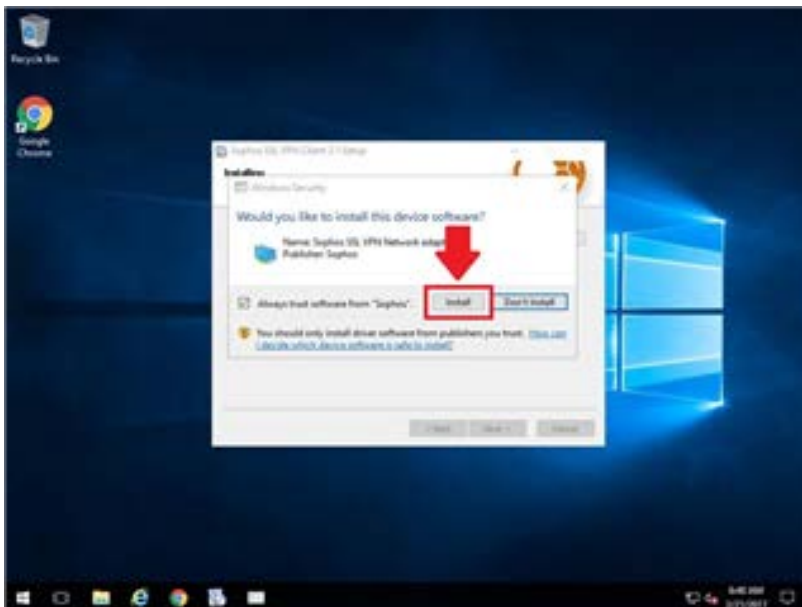

Step 8: Read through the license agreement and then click "I Agree"

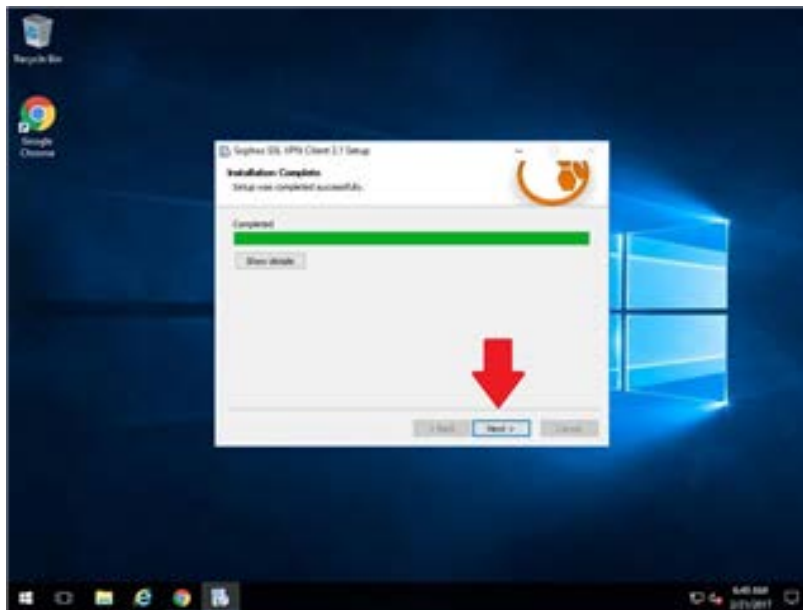

Step 9: Verify the location of where you want the application to be installed, then click "Install"

Step 10: In the windows security pop-up click "Install"

Step 11: Once the install process has completed click "Next" then "Finish"

Step 12: Now that you have the SSL VPN Client installed you'll now want to establish your connection.

A) Access your hidden tray icons

B) Look for the icon that has 3 squares one of them being red

Step 13: Right-Click the VPN icon and select "Connect"

Step 14: Login with the same Username and Password used in "Step 4"

Step 15: Verify your connection by seeing if the tray icon went from Red to Green
